

Abstract of the Disclosure

The invention relates to a laundry iron comprising a water reservoir (3) provided with a filling hole (5) situated at the rear end of the iron so that the reservoir (3) is filled while holding the iron tipped forward. Said reservoir (3) communicates with a drop-by-drop body (7) that supplies a vaporization chamber (10). The invention is characterized in that the drop-by-drop body (7) is supplied by a channel (8) that open near the rear of the reservoir (3).
